July 24, 1947

Hon. Louis P. Gagne,
Mayor
Lewiston, Maine

Dear Sir:

American City Magazine has kindly forwarded to us your request for further information on the application of aerial photography and photogrammetry to city planning.

Unfortunately, our general catalog, which is in the process of preparation, will not be ready for distribution for some months. We are placing your name on our mailing list so that when the catalog is published you will receive a copy.

Aerial photography and photogrammetry offer the municipal engineer everything in maps, from ordinary air views which help in the visualization of a problem, to accurate mosaic maps on which street alignment and similar problems may be studied in exact relationship to all physical features on the ground, and large scale contour maps which may show the exact outline of every building and precise contours. Contour maps by photogrammetric methods are made at scales ranging from 1" = 20' to 1" = 1 mile, with contour intervals ranging from 2' to 50'.

If you will be so kind as to advise us as to the detailed requirements of any problem which you may have under consideration, we will be most pleased to suggest how aerial photography and photogrammetry may aid you in the solution of your problem.

Yours very truly,

FAIRCHILD AERIAL SURVEYS, INC.

Leon T. Eliel
